PROFESSIONAL SUMMARY

Proven Software Engineer currently working on an enterprise-grade web application used for Remote Farm/Systems/VM Management, OS Provisioning, AI Automation and more at Intel scale. Taken ownership of several core production modules in the project within the first 8 Months on a lean team. Hands-on experience in Fullstack Development (Angular, Java Springboot, Flask, SQL Server, PostgreSQL), Docker, Kubernetes CaaS, CI/CD Integration in day-to-day tasks. Contributes to Git-based code reviews, sprint and requirements planning, architecture initiatives and mentors newly onboarded engineers.

Former L3 System Support Engineer at Setel with a track record of incident resolution across multiple application portfolios. Graduated first-class as the Department's Overall Best Student with 3.93 CGPA. Young but ambitious, highly adaptable and driven to delivering bigger contributions.

CORE TECHNICAL FOUNDATIONS

- **Languages** : Java, JavaScript/TypeScript, Python, SQL, C/C++, C#, Dart, HTML, CSS
- **Frameworks** : Angular, SpringBoot, Node.js, Flutter, Astro, .NET
- **Databases & Data Tools** : SQL Server (SSMS), PostgreSQL, MongoDB, DBeaver, Grafana, Holistics, Firebase
- **Containerization / Images / CICD** : Docker, Kubernetes / CaaS, Harbor, Github Actions, Jenkins
- **Additional** : Agile/Scrum, Sprint & Quarter Planning, Code Review, Jira, Confluence Documentations, Swagger, Bruno, Big Data (Hadoop, Spark), AI/Model Training, Digital Electronics, R (Statistical Computing)

PROFESSIONAL EXPERIENCE

Software Engineer
Nov 2025 - Present
Sophic Automation, Bayan Lepas

Intel oneLab
- Super-app for internal **Intel** employees for Farm Management, Systems Reservation, OS Provisioning, VM Management, AI Automation and more.
- Ownership of two core modules, Admin and Systems which interconnects most core platform functions in oneLab.
- Rolled out GitHub Actions CI/CD pipelines across the team's backend microservices repositories to standardize build and deployment workflows.

Intel CBRD External
- Simpler version of oneLab which acts as the extending interface for remote connections of **Intel** systems to the external-facing customers.
- Entrusted full ownership of the system features, KTBR and direction.
- Engineered a high-impact system optimization, cutting user remote connection wait times to **Intel** systems by half.
- Contribute to infrastructure and architecture planning discussions aimed at improving system scalability and security.

General
- Deliver features end-to-end
  - Requirement analysis - full-stack development (Angular + Spring Boot + Flask)
  - Manual test case authoring, deployment, and post-release validation
  - Independently owning root-cause analysis and fixes for production issues.
- Operate hands-on within a Kubernetes-based CaaS production environment - Managing deployments/pods, and facing Harbor container registries.
- Sustained team impact spanning a headcount reduction from 8 to 3 engineers.
  - Informally mentor new team members, contribute to sprint/quarter planning for owned modules, and participate as a PR reviewer, with growing focus on coding-standard adherence.

L3 System Support Engineer Intern
March - Sept 2025
Setel Ventures, Kuala Lumpur

Setel Mobile Application
- Supported and triaged production issues across multiple application portfolios spanning Fuel, Fintech, Mobility, and Core systems.
- Within 6 months of tenure, closed **297** production issues raised with resolutions.
- Hands-on experience with log analysis and troubleshooting using tools such as Grafana, MongoDB, Mixpanel, Holistics, and Swagger for investigation and resolution.
- Collaborated with cross-functional engineering teams and external stakeholders to drive timely incident resolution.
- Authored internal troubleshooting documentation and contributed to team knowledge-sharing initiatives.

EDUCATION

Bachelor of Computer Science (Honours) - Software Engineering *2021 - 2025*
International Islamic University Malaysia, Gombak, Selangor

- **CGPA**: 3.93 / 4.00 - Dean's List All Semesters
- **Electives**: Cybersecurity & Data Science
- **Award** : Best Overall Student in Kulliyah of Information & Communications Technology

Foundation in Engineering & ICT *2020 - 2021*
Centre for Foundation Studies IIUM, Gambang, Pahang

- **CGPA**: 3.63 / 4.00

PROJECTS

- **Bodega Portfolio Shop**
  - Created a personal portfolio with own twist, designing it based off modern clothing retailers online shopping experience whereby the products are personal projects and information.
- **ShuttleAide : University Bus Tracking App**
  - Built a fully functional real-time bus tracking mobile app using Flutter, IoT GPS, and Firebase, with live location display via open-sourced OpenStreetMap and dynamic ETA calculation.
- **Carbon Emissions & Global Temperature Analysis**
  - Applied correlation, regression, and XGBoost models in Python to analyze the relationship between CO_2 emissions and global temperature trends.
- **Sentiment Analysis on Movie Reviews**
  - Developed a simple sentiment analysis system for movie reviews using a combination of Logistic Regression and Naive Bayes algorithm model using a public IMDB Dataset.
  - The system was successfully able to effectively classify movie reviews' sentiments and differentiate between a positive or negative sentiment all directly through word/sentence analysis.
- **Flying Things : Greenfoot Game**
  - Built in Java with Greenfoot, Flying Things is a game inspired by Flappy Bird.
  - The project adds character choice to the familiar flying-and-dodging loop where players can take to the sky as a rocket, witch, or superhero and avoids dangerous birds flying towards them.

CERTIFICATIONS

- **Google Data Analytics Professional Certificat**e
- Intermediate Python – **DataCamp**
- **British Council Aptis Test** – Highest Grade
