Tengku Zarul Fariman Bin Tengku Zahidi

Software Engineer | Fullstack Development | Cloud & DevOps

Email: zarulfariman@gmail.com **Phone**: +60195151699
LinkedIn: linkedin.com/in/tengku-zarul

PROFESSIONAL SUMMARY

Full-stack Software Engineer with growing ownership of core modules on an enterprise-grade cloud platform (Angular, Java Spring Boot, SQL Server, PostgreSQL) used for remote system management, tester reservation, and OS provisioning at Intel scale. Within 8 months, took ownership of two production modules on a lean team, integrated CI/CD pipelines across backend microservices, and gained hands-on production experience with Docker, Kubernetes (CaaS), and Harbor registries. Mentors newly onboarded engineers, contributes to sprint planning and code review, and actively drives coding-standard and architecture improvements. Former L3 Support Engineer with a track record of incident resolution across multiple application portfolios. Graduated with a 3.93 CGPA and Best Overall Student honors.

CORE TECHNICAL SKILLS

- **Languages** : Java, JavaScript/TypeScript, Python, SQL, C, C++, C#, Dart, HTML, CSS
- **Frameworks & Libraries** : Angular, Spring Boot, Node.js, Flutter, RESTful API design & integration
- **Cloud, Containers & DevOps** : Docker, Kubernetes / CaaS (pods, deployments, image management), Harbor Registry, Git, GitHub Actions (CI/CD pipeline design & implementation)
- **Databases & Data Tools** : SQL Server (SSMS), PostgreSQL, MongoDB, DBeaver, Grafana, Holistics, Firebase
- **Collaborations & Practices** : Agile/Scrum, Sprint & Quarter Planning, Code Review, Jira, Confluence, Swagger, Bruno, Slack
- **Academic Foundation** : Big Data (Hadoop, Spark), AI/Model Training, Computer Architecture, Digital Electronics, R (Statistical Computing)

PROFESSIONAL EXPERIENCE

Software Engineer — Intel oneLab / Cloud Based Remote Debug (CBRD) Project *Nov 2025 - Present*
Sophic Automation, Bayan Lepas

- Own two core modules on **CBRD**, an enterprise cloud platform enabling remote management of collaterals (KVMs, PDUs, SUTs), linked systems, VMs, and tester reservations, plus OS provisioning at Intel scale:
  - **(1)** the Admin/System module that interconnects all core platform functions, and
  - **(2)** CBRD External, the customer-facing portal extending platform access to non-Intel external users.
- Deliver features **end-to-end** — requirement analysis, full-stack development (Angular + Spring Boot), manual test case authoring, deployment, and post-release validation — while independently owning root-cause analysis and fixes for production issues.
- **Rolled out** GitHub Actions CI/CD pipelines across the team's backend microservices repositories, partnering with the central pipeline team to standardize build, test, and deployment workflows.
- Operate hands-on within a **Kubernetes-based** CaaS production environment — building **Docker** images, managing deployments/pods, and facing **Harbor** container registries.
- **Sustained team impact** through 8 months spanning a headcount reduction from 8 to 3 engineers and the subsequent onboarding of 2 new hires: informally mentor new team members, contribute to sprint/quarter planning for owned modules, and participate as a PR reviewer, with growing focus on coding-standard adherence.
- Contribute to infrastructure and architecture planning discussions aimed at improving **system scalability** and **security**.

L3 System Support Engineer (Intern) *March - Sept 2025*
Setel, Kuala Lumpur

- Supported and triaged production issues across multiple application portfolios spanning **Fuel**, **Fintech**, **Mobility**, and **Core** systems, using **Grafana**, **MongoDB**, **Mixpanel**, **Holistics**, and **Swagger** for investigation and resolution.
- **Collaborated** with cross-functional engineering teams and external stakeholders to **drive timely incident resolution**.
- **Authored** internal **troubleshooting documentation** and contributed to team knowledge-sharing initiatives.
- Built foundational skills in incident analysis, technical communication, and system-level troubleshooting later applied directly to production support of the CBRD platform.

EDUCATION

Bachelor of Computer Science (Honours) - Software Engineering *2021 - 2025*
International Islamic University Malaysia, Gombak, Selangor

- **CGPA**: 3.93 / 4.00 - Dean's List All Semesters | **Electives**: Cybersecurity & Data Science
- Awarded Best Overall Student in Kulliyah of Information & Communications Technology

Foundation in Engineering & ICT *2020 - 2021*
Centre for Foundation Studies IIUM, Gambang, Pahang

- **CGPA**: 3.63 / 4.00

PROJECTS

- **ShuttleAide** — University Bus Tracking App (Final Year Project): Built a fully functional real-time bus tracking mobile app using Flutter, IoT GPS, and Firebase, with live location display via OpenStreetMap and dynamic ETA calculation.
- **Carbon Emissions & Global Temperature Analysis** — Applied correlation, regression, and XGBoost models in Python to analyze the relationship between CO_2 emissions and global temperature trends.
- **Smart Sejadah** — IoT Prayer Guidance System: Designed full system requirements and use-case flows for an IoT-enabled prayer mat; implemented a sensor-driven prototype in Assembly Language to validate posture/timing and trigger real-time guidance cues.
- **Sentiment Analysis on Movie Reviews** — Developed a simple sentiment analysis system for movie reviews using a combination of Logistic Regression and Naive Bayes algorithm model. The system was successfully able to effectively classify movie reviews' sentiments and differentiate between a positive or negative sentiment all directly through word/sentence analysis.

CERTIFICATIONS

- **Google Data Analytics Professional Certificat**e
- Intermediate Python – **DataCamp**
- **British Council Aptis Test** – Highest Grade
